

Mastery Information			Comp./ Obj. #	DOK	Progress Chart Advanced World Geography
Date	+	-			
			1		1. Understand the role of the United States in the world system.
			1a		a. Recognize and explain the effects of U.S. public opinion and U.S. policies on other peoples and countries around the world.
			1b		b. Analyze and evaluate the ways that public policy makers in the United States manage post Cold War tensions between the U.S. as world superpower and other countries and organizations as emerging powers.
			2		2. Understand the physical environments of the world along with the processes that shape them and the problems they present to human occupation and use.
			2a		a. Explain and analyze the concepts and processes that create, maintain, and modify physical environments around the world and explain the patterns and distributions of physical environmental characteristics that result from those processes.
			2b		b. Analyze problems associated with the complex interactions between human activity and the physical environments around the world (e.g., natural hazards, drought and redistribution of water, agricultural production and food security, movement of air and water pollution, etc.).
			3		3. Understand how population, migration, culture, economics, urbanization, and political factors produce complex networks and systems of human activity around the world.
			3a		a. Explain and analyze the concepts and processes that shape the patterns and distributions of human activity around the world.
			3b		b. Identify regions of various types around the world and explain how their characteristics give each a measure of cohesiveness and distinctiveness that set them apart from one another.
			3c		c. Identify the characteristics of human settlements around the world, sort them into categories (e.g., urban, suburban, and rural, gentrified, slums, etc.), and analyze their patterns, functions, and processes of change.

				d. Explain and analyze how the forces of contact, cooperation, and conflict influence the division and control of earth's surface based on political, ethnic, and religious groupings.
		3e		e. Describe patterns of global power and influence.
		4		4. Understand the geographic patterns and processes found around the world.
		4a		a. Identify the characteristics and interpret the patterns of the geography of the world by using the concepts of geography (e.g., map elements, latitude and longitude, time zones, mental maps, map projections, etc.).
		4b		b. Use maps and other geographic representations, tools, and technologies (e.g., population pyramids, climographs, geographic information systems, satellite images, aerial photography, etc.) to analyze information to identify problems associated with the processes of interaction among and between the people, places, and environments around the world.
		5		5. Understand civil rights and human rights in the contemporary world.
		5a		a. Identify and analyze the circumstances of the world's indigenous peoples and assess the causes and effects of those circumstances.
		5b		b. Analyze how processes of structural racism (e.g. social justice, environmental racism, power relations, the gap between rich and poor, the North/South divide, and migration streams) operate in diverse places and groups around the world.
		6		6. Understand economic development, economic globalization, and global resource use.
		6a		a. Explain and analyze the geographic processes of economic interactions among people, places, and environments of the world by using maps and other geographic representations, tools, and technologies.
		6b		b. Identify and explain measures of economic development and draw conclusions about the lives and futures of people and societies in the various world regions, countries, and regions within countries.

			6c	c. Analyze evidence for global economic interdependence and evaluate the impacts and consequences of that interdependence (e.g., regional trade agreements, outsourcing, global division of labor).
			6d	d. Identify and explain human livelihoods (agriculture, manufacturing, services, etc.) and distinguish between wage-earning and subsistence economies.
			6e	. e. Identify and analyze the ways in which innovations in transportation and communication networks impact the world.
			6f	f. Identify world patterns of resource distribution and utilization
			6g	g. Identify and analyze the changes that occur in the meaning, use, sustainability, and importance of resources.
			6h	h. Describe the best locations for industries, businesses, services, etc. around the world and within the various world regions, countries, and regions within countries by analyzing information such as market areas, resources, labor supply, etc.
			7	7. Understand the characteristics, distribution, and complexity of Earth's cultural mosaics.
			7a	a. Identify and describe processes of divergence and convergence of cultures.
			7b	b. Identify and explain the characteristics, distributions, and migrations of human populations on Earth's surface.
			7c	c. Identify and analyze the ways in which places and regions contribute to the production of individual and social identity.
			7d	d. Identify and describe major culture regions of the world and explain how their characteristics give each a measure of cohesiveness and distinctiveness that set them apart from one another
